

What to Expect After Your Treatment

Your Bed Bug infestation was: Low, Medium, or High

-Low: After your initial treatment, you should be **bed bug FREE** (unless there is a re-infestation or a re-introduction). If you see **ANY** bed bug activity in the next few days or weeks please communicate this to our office.

-Medium: After your treatment today, it is possible to see bed bug activity for the next 7 to 14 days. Today we killed **ALL** or **MOST ALL** of the bed bugs. Any survivors should **DIE OFF** from the residual liquid treatment we applied today (in addition to the heat treatment).

-High: after today's treatment, it is likely to see bed bug activity for the next couple of weeks. We applied a liquid barrier today (in addition to the heat treatment), and recommend additional liquid treatments every 2 or 3 weeks until the bed bugs have been eliminated. Please contact our office to schedule a follow up treatment.

*** Please keep any sample bed bugs in a glass jar and monitor for a few weeks.**

*** Please document and share with us where you see bed bugs, so we can provide the most effective follow up treatments.**
